

PRACTICAL 6

AIM: Install Samba to share folders or files between Windows and Linux.

STEPS TO INSTALL SAMBA AND SHARE FOLDER'S AND FILE'S:

Step 1: This is the basic step and should be performed every time, that is to update system repositories.

sudo apt-get update

```
atharva@Atharva:~$ sudo apt-get update
[sudo] password for atharva:

Fetched 12.3 MB in 13s (982 kB/s)
```

Step 3: Now you need to configure the shared folder so first thing you want to do is to edit the configuration file.

`sudo nano /etc/samba/smb.conf`

```
[global]

## Browsing/Identification ##

# Change this to the workgroup/NT-domain name your Samba server will part of
workgroup = WORKGROUP
```

```
##### Authentication #####

# Server role. Defines in which mode Samba will operate. Possible
# values are "standalone server", "member server", "classic primary
# domain controller", "classic backup domain controller", "active
# directory domain controller".
    security=user

# Most people will want "standalone server" or "member server".
# Running as "active directory domain controller" will require first
# running "samba-tool domain provision" to wipe databases and create a
# new domain.
    server role = standalone server

    obey pam restrictions = yes
```

```
;  
;[profiles]  
; comment = Users profiles  
; path = /home/samba/profiles  
; guest ok = yes  
; browseable = yes  
; create mask = 0600  
; directory mask = 0700
```

Step 4: Now we will make the directory and check if it's created or not.

a) `sudo mkdir -p /srv/samba/share`

```
atharva@Atharva:~$ sudo mkdir -p /srv/samba/share
```

b) `cd /srv`

```
atharva@Atharva:~$ cd /srv  
atharva@Atharva:/srv$
```

c) `ls`

```
atharva@Atharva:/srv$ ls  
samba
```

d) `ls samba`

```
atharva@Atharva:/srv$ ls samba  
share
```

STEP 5: Once you have made the directories you need to change ownership so to do that we execute the following command.

`sudo chown nobody.nogroup /srv/samba/share`

```
atharva@Atharva:/srv$ sudo chown nobody.nogroup /srv/samba/share
```

Step 6: Now we have to list the files present the directory we created, so we will use the list long command but before that we will move into the directory.

a) `cd /srv/samba`

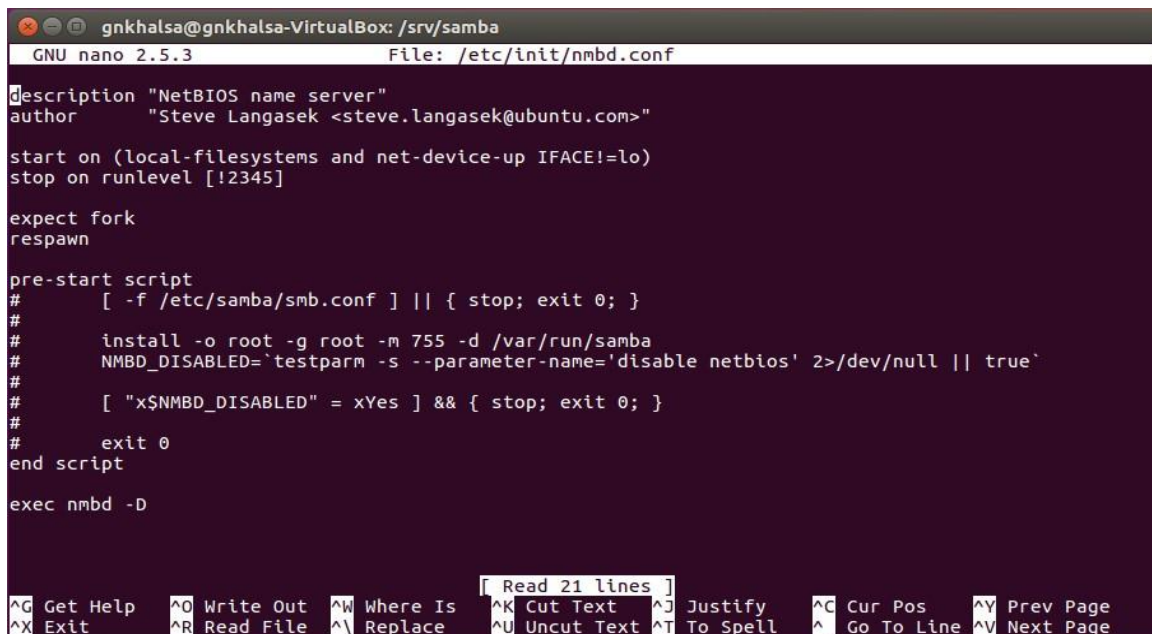

```
atharva@Atharva:/srv$ cd /srv/samba  
atharva@Atharva:/srv/samba$
```

b) ll

```
atharva@Atharva:/srv/samba$ ll
total 12
drwxr-xr-x 3 root    root    4096 Aug 18 22:14 ./
drwxr-xr-x 3 root    root    4096 Aug 18 22:14 ../
drwxr-xr-x 2 nobody nogroup 4096 Aug 18 22:14 share/
```

Step 7: Now we will configure the nmbd file for samba, for that we will use the following command.

```
sudo nano /etc/init/nmbd.conf
```

```
gnkhalsa@gnkhalsa-VirtualBox: /srv/samba
GNU nano 2.5.3 File: /etc/init/nmbd.conf

description "NetBIOS name server"
author      "Steve Langasek <steve.langasek@ubuntu.com>"

start on (local-filesystems and net-device-up IFACE!=lo)
stop on runlevel [!2345]

expect fork
respawn

pre-start script
# [ -f /etc/samba/smb.conf ] || { stop; exit 0; }
#
# install -o root -g root -m 755 -d /var/run/samba
# NMBD_DISABLED='testparm -s --parameter-name='disable netbios' 2>/dev/null || true'
#
# [ "$NMBD_DISABLED" = xYes ] && { stop; exit 0; }
#
# exit 0
end script

exec nmbd -D

[ Read 21 lines ]
^G Get Help ^O Write Out ^W Where Is ^K Cut Text ^J Justify ^C Cur Pos ^Y Prev Page
^X Exit ^R Read File ^\ Replace ^U Uncut Text ^T To Spell ^_ Go To Line ^V Next Page
```

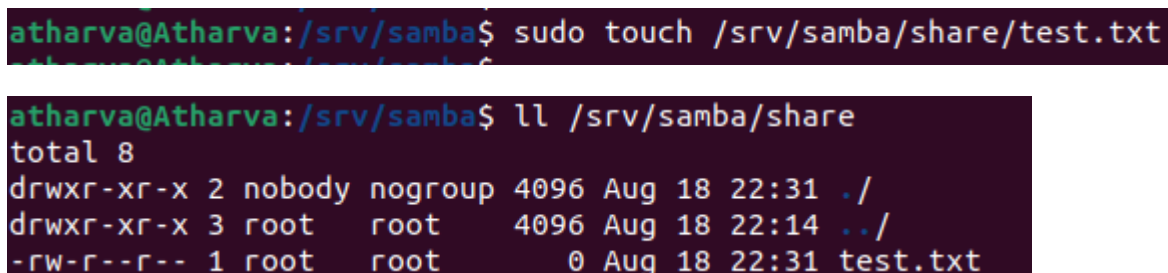

Step 8: Now we will restart our nmbd and smb services using commands.

```
sudo service smb restart
```

```
atharva@Atharva:/srv/samba$ sudo service smb restart
```

Step 9: Now create a file using touch command in /srv/samba/share named test.txt and we will check if our file is created or not.

```
sudo touch /srv/samba/share/test.txt
```

```
atharva@Atharva:/srv/samba$ sudo touch /srv/samba/share/test.txt
atharva@Atharva:/srv/samba$ ll /srv/samba/share
total 8
drwxr-xr-x 2 nobody nogroup 4096 Aug 18 22:31 ./
drwxr-xr-x 3 root    root    4096 Aug 18 22:14 ../
-rw-r--r-- 1 root    root      0 Aug 18 22:31 test.txt
```
